

ROKLIN introduces Street Weld. A new concept in troublesome Pavement and Parking Lot Maintenance. With no special or heavy equipment required, maintenance forces can repair and restore their own parking lots and pavements without bringing in expensive pavers. Longer lasting, easy to install and cost effective on repetitive, recurring repairs, the Street Weld method using FloMix gets the job done. "When just a band aid won't cut it use FloMix for a solid, longer lasting pothole repair "

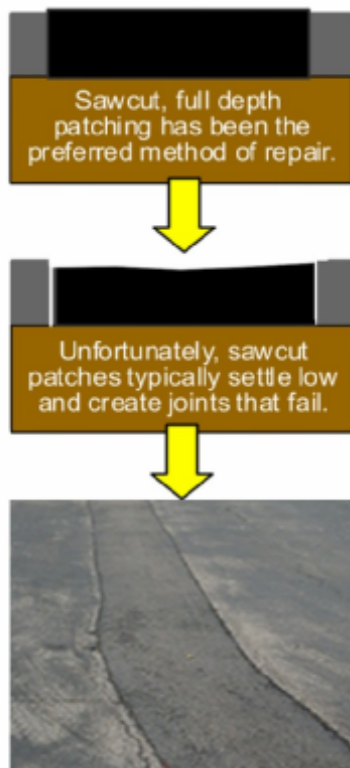

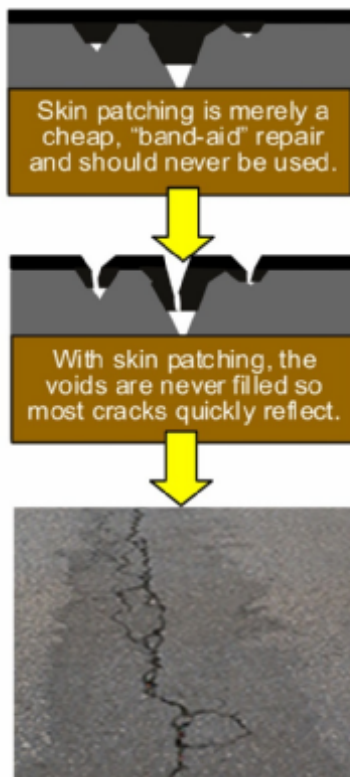

Key Benefits

- Tough, Advanced Urethane Slurry
- Fills Cracks Flush to Grade
- No Shrinking or Reflective Cracking
- Eliminates Damaging Sawcut Joints

With STREET-WELD™, you can now have perfect "grade level" repairs that will not compromise the structural integrity or existing drainage elevations of your asphalt pavements. You also get true restorative repairs - both sides of asphalt cracks are permanently bonded with joints far stronger and more waterproof than asphalt cement.

STREET-WELD™ works by completely replacing the original asphalt mix where it has cracked or eroded with Flo-Mix®, technologically advanced urethane slurry. Flo-Mix® tenaciously bonds to the existing asphalt, filling cracks flush to the original grade without shrinking, reflective cracking, or creating new saw cut joints.
