

SERVICE, KNOWLEDGE & DEPENDABILITY

For over 20 years, Main Street Materials has been providing quality road maintenance products and services to our customers. Our mission is to consistently provide quick turnaround, quality products, and an attractive price. Our unsurpassed level of product expertise provides us the ability to offer product consultation and hands-on service.

Main Street Materials is always looking for ways to further increase customer satisfaction by expanding our product offerings into facilities, bridges, electrical and lighting supplies, and safety devices.

THE EDGE SEAL

THE EDGE SEAL

THE EDGE SEAL is the best solution to fix, fill and seal asphalt along the concrete edge joint.

- ▶ **Low in-place cost**
- ▶ **Fast – two miles-per-hour in one pass**
- ▶ **Mechanical – no feet on ground**
- ▶ **Uses conventional equipment**
- ▶ **Moving lane closures**
- ▶ **Tough and flexible**
- ▶ **Load-bearing**
- ▶ **Safe for skid resistance**
- ▶ **UV and oxidation resistant**
- ▶ **Meets current specifications**

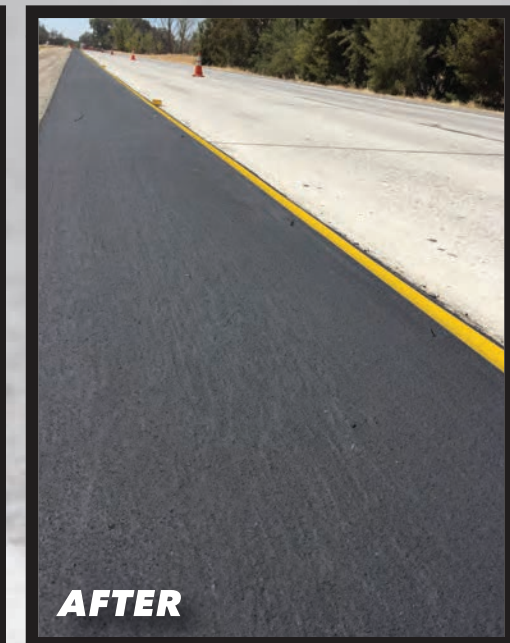

IT'S THE RIGHT SOLUTION AT THE RIGHT PRICE!

Instead of multiple days of potholing and crack sealing, agencies can now address unsafe PCC/AC edges in one quick pass, safely.

THE EDGE SEAL is an early Preservation treatment, and a treatment for Slightly Damaged and Heavily Damaged areas all rolled into one.

THE EDGE SEAL can be applied using readily available equipment, with no new or minimal capital investment.

How it works

THE EDGE SEAL system replaces old technology and the slow, labor-intensive methods of fixing, filling and sealing damage along the joint edge.

The system works using modern slurry and microsurfacing equipment processes with a specially formulated emulsion - **PASS[®] MAXX** - designed for crack sealing.

The emulsion is formulated with a very tough yet flexible polymer and rejuvenating agent, which exhibits stable performance in an extreme range of temperatures.

For areas beginning to show cracking and oxidation, **THE EDGE SEAL** will rejuvenate and seal the existing asphalt from further damage.

For more heavily damaged sections including potholes, it is possible to safely "stack" applications to completely level the pavement, similar to microsurfacing but with superior flexibility and adhesion.
