

HOW WE FIXED IT

Severe Pavement Cracks & Roadway Settling

**Learn
how to quickly
stabilize & fix
your roadways**

Main Street Materials Educational Series

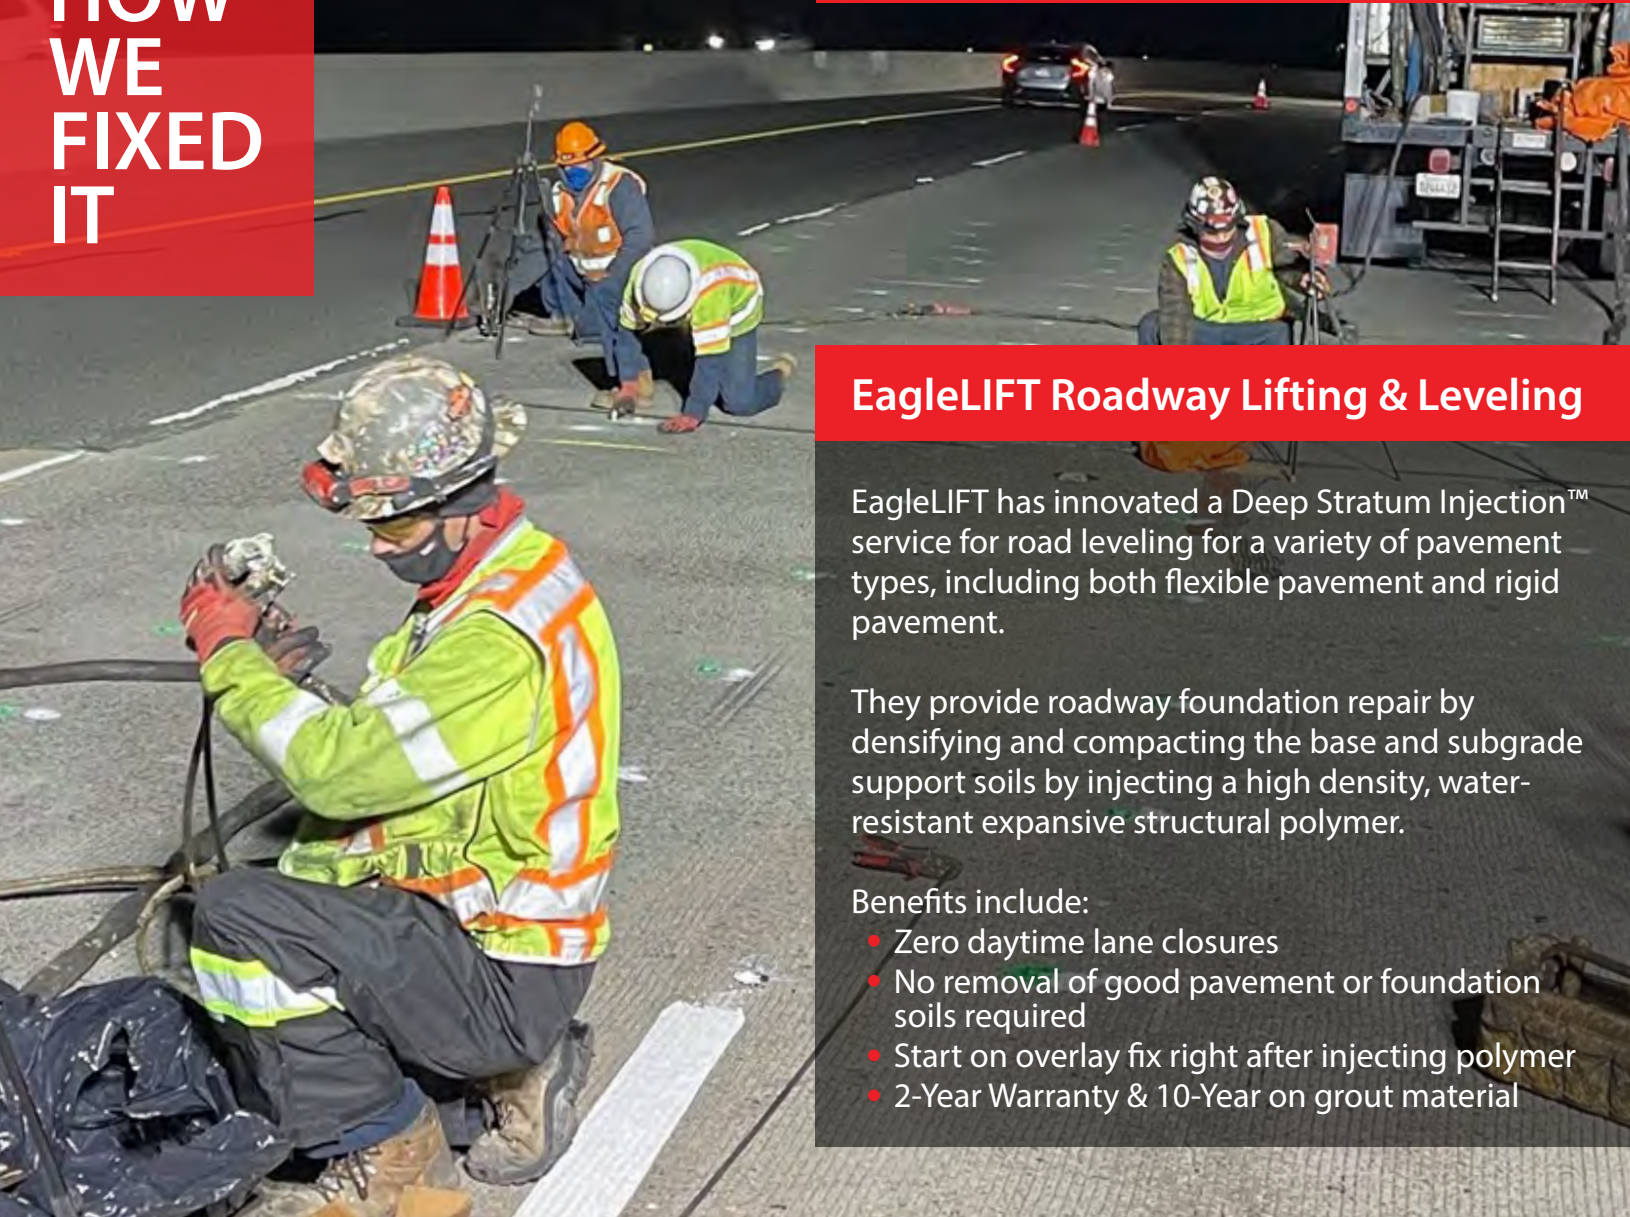

Settling roadways cause cracking, rutting and dangerous uneven surfaces.

Soil degradation can cause havoc on the roadway. This can happen over time because of improperly compacted soil, soil washout from pavement cracks, heavier loads on roads, etc. Can they be fixed quickly and economically? You bet.

Check out the next page to see how we fixed it.

HOW WE FIXED IT

EagleLIFT Roadway Lifting & Leveling

EagleLIFT has innovated a Deep Stratum Injection™ service for road leveling for a variety of pavement types, including both flexible pavement and rigid pavement.

They provide roadway foundation repair by densifying and compacting the base and subgrade support soils by injecting a high density, water-resistant expansive structural polymer.

Benefits include:

- Zero daytime lane closures
- No removal of good pavement or foundation soils required
- Start on overlay fix right after injecting polymer
- 2-Year Warranty & 10-Year on grout material
