

Tire Rubber Modified Surface Sealer Revolutionizes Road Longevity and Beauty

Environmentally-Friendly TRMSS Has Saved California Agencies Millions of Dollars by Extending the Life of an Existing Road and Making it Look New Again!

So What is TRMSS?

TRMSS stands for Tire Rubber Modified Surface Sealer. It is a road sealer made of approximately 25-27 recycled tires per lane mile. The formulation is very unique in that it provides amazing UV protection, incredible durability, and a single coat is all your road needs to look new again at a fraction of the cost of replacing the damaged roadway.

Keeping Your Road Looking Newer LONGER

There are many factors that contribute to a new surface treatment wearing off the top of the rock surface (Traffic load, UV, Water). With TRMSS ability to be spread up to a .18 gal/sy the rock coverage is the best the industry has seen. We have many customers saying how TRMSS applied makes their once old roadway, look like it was just paved with hot mix asphalt, and at nowhere near the same expense.

“

TRMSS made this older road look new again and will keep it looking that way for years to come.

Where to Use TRMSS

Primarily for use on highways, highway shoulders, city streets, county roads and airports. TRMSS can be applied over chip seals and raveling slurry seal to lock in loose aggregates.

Like GuardTop's other products, TRMSS is easily applied. Prior to sealing, the pavement surface should be cleared of any excess dirt and debris and any and all asphalt repairs should be completed.

Recycled tire rubber improves UV protection, adhesion, and keeps an outstanding black color for years to come.
