

SuperPatch

Bulletproof patch for alligatored areas

Prevent water from reaching pavement subbase with SuperPatch—precut 2.3×3ft road patches with either 3/8 or 1/4 aggregate on a rubber backing

Use SuperPatch along with your composite crack sealing program to quickly seal areas long-term

SuperPatch can be easily cut to size, or placed side-by-side to cover large areas

Use the patch to cover alligatored areas or cover filled potholes to waterproof and keep material in place

Easy Application:

1. Clean and dry area
2. Apply composite sealant to area
3. Place patch on road
4. Apply pressure by stepping on patch
5. Seal edges with composite crack sealant

Bulletproof Protection

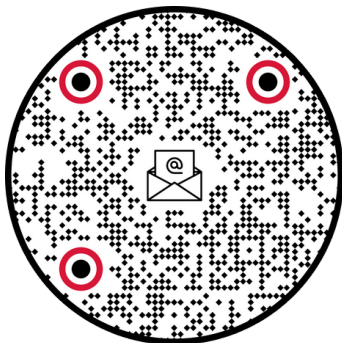

When used to apply SuperPatch, composite sealants provide incredible longevity and ensure that the area can be released to traffic in 5 minutes or less

SuperPatch sealed with composites has stayed in place for 3 years on heavily trafficked highways and busy intersections, such as HWY 198 and Hemet, CA

Australia places SuperPatch down with composite sealants and has had the patches shown above stay in place for 8+ years
